EAST LANE GOLF

Temperature & Altitude Card

How the air changes your carry

Air density changes how far the ball flies. Adjust your club, not your swing. These are rules of thumb.

Conditions	Effect on carry
Cold (around 5°C)	Up to ~5% less — take more club
Hot (around 30°C)	A touch more carry
Altitude, per 300 m	Roughly +2% carry
Rain / heavy air	Plays shorter — club up

Cold and wet both rob distance — never under-club.
